Option 1: Supervised Data Mining (Classification)

Submitted by: Sowmya Kothapalli

UCID: sk272

Email: sk272@njit.edu

Date: 05/04/2021

Programming Language: Python

Classification Algorithms Implemented:

- i) Random Forest
- ii) Naïve Bayes
- iii) KNN, K-Nearest Neighbor

Dataset used: Bank Marketing Data Set

Source of Data:

https://archive.ics.uci.edu/ml/datasets/Bank+Marketing

GitHub Repository Link:

https://github.com/Sowmyak91/CS643 Data mining FinalTerm Project

Code:

Detailed implementation of the classifiers process Steps to Implement the process:

1. Preprocess the data

Supervised Data Mining (Classification) ¶

```
In [287]: 1 import pandas as pd
           import numpy as np
import matplotlib.pyplot as plt
           4 import seaborn as sns
           5 %matplotlib inline
           6 import warnings
7 warnings.filterwarnings("ignore")
In [288]: 1 data = pd.read_csv('bank.csv', header=0)
2 data = data.dropna()
           3 print(data.shape)
          4 print(list(data.columns))
         (4521, 17)
['age', 'job', 'marital', 'education', 'default', 'balance', 'housing', 'loan', 'contact', 'day', 'month', 'duration', 'campaig
n', 'pdays', 'previous', 'poutcome', 'y']
